Summary

Software Engineer with a background in customer-facing software products, backend platforms, data workflows, and scalable service architectures, with deep experience in healthcare technology and revenue cycle management.

Professional Strengths

- Technologies include Node.js, TypeScript, Fastify, Java, SQL Server, PostgreSQL, MongoDB, Docker, RabbitMQ, GitHub Actions, and AI-assisted development.
- Experience designing and modernizing backend platforms, including SQL Server integration, internal APIs, bulk data processing systems, and containerized service deployments.
- Healthcare revenue cycle management (RCM) and medical records experience, including ASC X12 (270, 271, 835, 837, etc.) and NEMIS (EMS data-exchange) standards.
- Experience developing solutions for regulated and security-conscious environments, including SOC 1, SOC 2, HIPAA, PCI-DSS, and OWASP-aligned secure development practices.
- Experience collaborating with business stakeholders, engineering teams, and executive leadership on platform strategy and software delivery.
- Technical contributor on two U.S. software patents related to peer-to-peer communication and data communication auto-detection.

Experience

Independent Software Consultant, Cactus Media: Birmingham, MI • January 2026 - April 2026

- Supported and maintained legacy business applications while evaluating modernization strategies and long-term platform architecture improvements.
- Assisted with troubleshooting, data workflows, operational support, and integration needs for legacy systems during evaluation of modernization and replacement options.
- Designed and developed a modernized platform architecture supporting APIs, web applications, background jobs, and shared services using Node.js, TypeScript, Fastify, and SQL Server.
- Implemented modular service patterns, API surface isolation, health/readiness monitoring, configuration management, and shared infrastructure components.

Technical Lead, EMS Management and Consultants: Winston-Salem, NC • May 2024 - Aug 2025

- Contributed to the post-acquisition migration of 150+ clients from the legacy AccuMed Group platform to EMS | MC, ensuring 100% operational continuity with minimal disruption.
- Owned secure, reliable, and scalable IT operations aligned to corporate objectives; led Information Security, Systems Engineering, and Help Desk departments.
- Managed the development, rollout, and ongoing maintenance of a companywide Jira Service Management and Jira environment, including a primary Help Desk service project and additional department-specific ticketing systems.
- Advanced enterprise-wide SOC 1 & SOC 2 compliance programs, strengthening cybersecurity posture and meeting healthcare regulatory requirements.

Software Engineer, The AccuMed Group: Brownstown Twp, MI • Apr 2007 - May 2024

(Acquired by EMS Management & Consultants, above)

- Designed, developed, and led modernization of healthcare revenue cycle software platforms, billing operations systems, data workflows, and infrastructure supporting long-term business growth and eventual acquisition.
- Revitalized a stalled ePCR (Electronic Patient Care Reporting) project, delivering *eMedicReports* within 24 months, securing adoption by 90+ clients, and generating a new revenue stream. See: <https://pmc.ncbi.nlm.nih.gov/articles/PMC8045182/>
- Designed and implemented proprietary billing operations systems that improved accuracy, processing speed, and scalability, supporting long-term business growth.
- Achieved and maintained SOC 1 Type I & II compliance, while strengthening cybersecurity governance and workforce training.
- Provided technology leadership and operational stability during the company's sale in 2024, maintaining compliance and continuity through due diligence.

Education

Bachelor of Science, Computer Science (Minor: Business Administration)

Northern Illinois University, DeKalb, IL
